English Harbour Reverse Osmosis Plant

The Government of Antigua & Barbuda in collaboration with APUA has purchased a containerized Reverse Osmosis Plant which will be placed in English Harbour. The English Harbour area has a great demand for water, especially during its sailing season which has caused a notable strain on the already stretched water supply. The new plant at English Harbour will produce 400,000 imperial gallons a day and will service Falmouth Harbour, English Harbour and Picadilly. Tesfa Francis, Mechanical Engineer of the APUA Water Business Unit has travelled to the manufacturing facility in Dubai for the final inspection. After the manufacturing process has been completed, the Reverse Osmosis Plant will begin its journey from Dubai to Antigua in July.
